## **Honors and Awards**

Summer 2018	Graduate Research Program Partnership Fellowship, University of Minnesota,
	Minneapolis, Minnesota
2017, 2018	Distinguished Instructor, Department of Economics, University of Minnesota, Minneapolis,
	Minnesota. Received the award three times.
2016	Third Place, Third Year Paper Competition, Department of Economics, University of
	Minnesota, Minneapolis, Minnesota
Spring 2015	Distinguished Teaching Assistant, Department of Economics, University of Minnesota,
	Minneapolis, Minnesota
2013 - 2015	Bert and Susan Gross Fellowship, Department of Economics, University of Minnesota,
	Minneapolis, Minnesota
2011 - 2013	Honors Loan, Department of Economics, Universidad Torcuato Di Tella, Buenos Aires,
	Argentina
2011	Best Thesis in Finance Award, Department of Economics, Universidad de la Empresa,
	Uruguay

# **Teaching Experience**

2015 - present	<i>Instructor</i> , Department of Economics, University of Minnesota, Minnesota, Minnesota.
	Taught Principles of Microeconomics and advanced undergraduate Money and Banking.
2014 - 2015	Teaching Assistant, Department of Economics, University of Minnesota, Minneapolis,
	Minnesota. Led recitation sections for <i>Intermediate Microeconomics</i> .
2012 - 2013	Teaching Assistant, Department of Economics, Universidad Torcuato Di Tella, Buenos
	Aires, Argentina. Led recitations for Principles of Microeconomics, Principles of
	Macroeconomis, Intermediate Microeconomics, and Industrial Organization.
2009 - 2012	Teaching Assistant, Department of Economics, Universidad Argentina de la Empresa,
	Buenos Aires, Argentina.
	Led recitations for <i>Financial Mathematics</i> and <i>Corporate Finance</i> .

# **Research Experience**

Fall 2017	Consultant, Economic Development Fellows Consulting Program, University of Minnesota,
	Minneapolis, Minnesota.
2012	Research Assistant, Department of Economics, Universidad Torcuato Di Tella, Buenos
	Aires, Argentina. Research assistant to Emilio Espino and Juan M. Sanchez.

<sup>&</sup>quot;Financial Reform in an Economy with Firing Costs," job market paper

<sup>&</sup>quot;Corporate Tax Rates, Allocative Efficiency, and Aggregate Productivity," 2018

### **Abstracts**

"Financial Reform in an Economy with Firing Costs," job market paper

Emerging economies are characterized as having underdeveloped financial markets. Furthermore, many of these economies have employment protection laws that make it costly for firms to fire workers. Understanding the interaction between these features is key for evaluating financial and labor policy reforms since they have a direct impact on the allocation of resources and aggregate productivity. This paper quantifies the effect on aggregate productivity of an improvement in financial development in economies with firing costs. I develop a small open economy model with heterogeneous firms that face collateral constraints and have to pay firing costs. I calibrate the model using census plant-level data from the manufacturing sector in Chile. I find that aggregate productivity increases by 2.5 percent following a financial reform that makes Chile's level of financial development comparable to that of the United Kingdom. Ignoring firing costs underestimates the impact of the reform, predicting an increase in productivity of 0.3 percent. Acknowledging firing costs introduces two reasons why the financial reform has a stronger impact. On the one hand, firms with high past employment hoard labor and, as a result, demand more capital, which makes them more likely to be financially constrained. On the other hand, an increase in wages following the reform increases the effective firing cost and hence discourages firms with low past employment from hiring. As a result, these firms demand less capital than they would if there were no firing costs and are less likely to be financially constrained.

"Corporate Tax Rates, Allocative Efficiency, and Aggregate Productivity," with Fausto Patiño Peña

This paper quantifies the impact of effective corporate tax rates on aggregate total factor productivity (TFP). Using Chilean manufacturing data, we document a large dispersion in the effective tax rate faced by firms and a mass of firms facing 0 percent tax rate. We incorporate these findings into a standard monopolistic competition model with effective corporate tax rates. We find that eliminating corporate tax rates increases TFP between 4 and 11 percent. We consider counterfactual policies in which all firms face the same tax rate and find a monotonically decreasing relationship between the level of the tax rate and TFP.
